

Estimating Viewer

Because communication is vital to the success of any project, it makes sense to be able to quickly view and print your estimates.

But often estimate reviews and project updates with management and co-workers can demand more time than you have to give. With Estimating Viewer, you can streamline these processes and more easily keep all members of the project team well informed.

Estimating Viewer makes it possible for anyone connected to your network to view and print estimates for Sage Timberline Office. In addition, users have access to all the advanced sorting and reporting capabilities previously only available to estimators using Estimating. So, at any time, someone can quickly see where costs and quantities have varied between two similar projects. Or zero in on where unit costs have changed between conceptual, interim, and final estimates. Good information to have when making management decisions.

With Estimating Viewer, you have a safe way to share your estimate information. No takeoff, database-editing, or spreadsheet-editing capabilities are available in the software. So you can be sure your data will remain intact, no matter how many people are reviewing it.

Best of all, instant, electronic access to estimate information for others means you no longer need to spend valuable time circulating estimates from one party to another.

Product features

- Runs on Microsoft Windows operating systems.
- Provides user with read-only viewing of estimates.
- Gives user all the sorting, reporting, and printing capabilities available in Estimating Extended for Sage Timberline Office.
- Keeps data safe, as no takeoff, database-editing, or spreadsheet-editing capabilities are available.
